Unwanted Hair Gone
 with the latest leading SHR technology

The future of hair removal is here!

Tired of continually removing hair with traditional methods?

It is estimated that 75% of women would like to remove areas of hair growth permanently!

hair no more is the answer!
Superfast and pain free!

How does hair no more work?

Utilising the latest evolution in Laser & IPL technologies – SHR is the latest method for the removal of unwanted hair, superfast, safe and pain free!

A **hair no more** treatment uses selected wavelengths of low energy light rapidly pulsed onto the skin (180 times a minute) to gently heat the target hair follicles to cause terminal damage directly to the hair's chromophores and prevent hair regrowth. Endorsed by leading medical experts the SHR technology is safe and highly effective in the treatment of permanent hair reduction.

How long does a treatment take?

Using revolutionary e-motion delivery a **hair no more** treatment is completed in minutes. The treatment applicator is swept back and forth repeatedly across the designated area whilst rapid pulses of low energy light are pulsed into the skin ensuring full coverage and effective treatment.

Does it hurt?

Unlike traditional laser or IPL, using high energy levels that may cause discomfort and pain, a **hair no more** treatment is gentle and comfortable, resulting in a pleasant warming of the skin. Active skin cooling through the applicator capable of -4°C ensures complete comfort even in the most sensitive areas.

"I couldn't believe my hair no more treatment, it was so easy, comfortable, completely pain free and really fast, taking less than 10 minutes"

Who is it suitable for?

A **hair no more** treatment can be performed on all skin types. The SHR technology of low energy pulses allows for the successful treatment in both dark and fair skin types alike, even tanned skin. Suitable for both women and men, **hair no more** is the answer!

How many treatments will I need?

Each **hair no more** treatment effects approximately 30% of the hair within the target area. We recommend a minimum of 6 treatments, with some hair types requiring more. The average for a successful program is 8 treatments.
